Temperature: Water and air temperature are given in degrees Celsius ($^{\circ}\text{C}$), which can be converted to degrees Fahrenheit ($^{\circ}\text{F}$) by use of the following equation:

$$^{\circ}\text{F} = 1.8 (^{\circ}\text{C}) + 32$$

SELECTED TERMS AND SYMBOLS

foot: ft

greater than: >

less than: <

micrometer (μm): The millionth part of the meter—the pore diameter of filter media is given in micrometer units.

NA-MUG: nutrient agar-4-methylumbelliferyl- β -D-glucuronide

normality, N (equivalents/L): The number of equivalents of acid, base, or redox-active species per liter of solution. Examples: a solution that is 0.01 F in HCl is 0.01 N in H^+ . A solution that is 0.01 F in H_2SO_4 is 0.02 N in acid.

plus or minus: \pm
